Computer Networks - TCP/IP Protocol Architecture

Course: Computer Networks | Semester 5 | Contributor: Priya Sharma

IPv4 CIDR subnetting, TCP 3-way handshake, sliding window flow control, and DNS hierarchy.

Transport Layer Protocols

* TCP 3-way handshake SYN, SYN-ACK, ACK and 4-way termination handshake FIN, ACK.
* TCP Congestion control: Slow Start, Congestion Avoidance, Fast Retransmit, and Fast Recovery.
* Go-Back-N vs Selective Repeat sliding window protocols efficiency comparisons.

Network Layer & Subnetting

* CIDR notation, subnet mask calculations, and broadcast address derivations.
* Distance Vector Routing Bellman-Ford, Count-to-Infinity vs Link State Routing OSPF/Dijkstra.
* NAT Network Address Translation and private IP ranges RFC 1918.
