Compiler Design - Lexical Analysis & Syntax Parsing

Course: Compiler Design | Semester 6 | Contributor: Rohan Verma

NFA to DFA subset construction, LL1 First & Follow sets, LR0, SLR1, and LALR parser tables.

Lexical Analysis & Regular Expressions

* Thompsons construction of NFA from regular expressions.
* Powerset subset construction for NFA to DFA conversion.
* Hopcrofts DFA state minimization algorithm.

Syntax Analysis & Parsing Tables

* Left recursion elimination and left factoring for top-down LL1 parsers.
* Computation of First and Follow sets with formal rules.
* Bottom-up LR parsing: LR0 items, closure and goto functions, shift-reduce conflict resolution.
